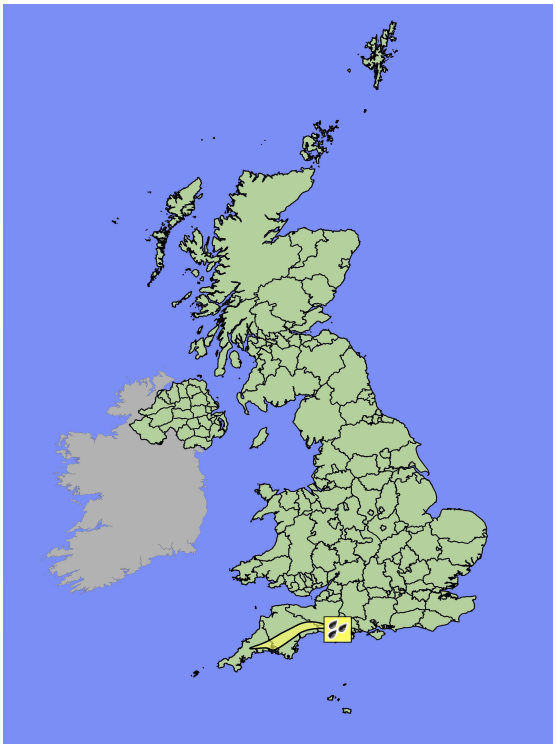
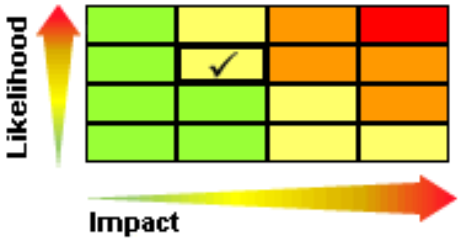
National Severe Weather Warning Service





Chief Forecasters Assessment
Today's showers are nothing out of the ordinary and many places should miss the heaviest. Where they do occur, amounts will be mostly limited to less than 15 mm but perhaps topping 20 or 30 mm very locally, these amounts falling within a few hours. However, coming on top of the rain that fell a couple of days ago, and with streams and rivers still high and fields very wet, there may be some quick responses in terms of run-off.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **15:00 on Mon, 09th Jul 2012** until **23:59 on Mon, 09th Jul 2012**

Scattered heavy showers are expected to continue to develop during Monday, persisting into the evening. Although intensities will fall well short of those seen recently, the ground is so saturated in many areas that they may cause some local impacts - the public should be aware of the risk of localised surface water flooding as a result.
